BULLISH INDUSTRIES

Industry	Breadth	Momentum
Oil & Gas Refining & Marketing	89%	+12.46%
Computer Hardware	100%	+8.72%
Medical - Diagnostics & Research	92%	+4.98%
Software - Infrastructure	82%	+4.46%
Communication Equipment	70%	+4.27%

Industry	Breadth	Momentum
Oil & Gas Integrated	100%	+4.22%
Medical - Healthcare Information Services	67%	+3.77%
Marine Shipping	100%	+3.63%
Drug Manufacturers - General	100%	+2.82%
Medical - Care Facilities	71%	+2.26%

Industry	Breadth	Momentum
Medical - Instruments & Supplies	67%	+2.06%
Discount Stores	71%	+1.82%
Medical - Healthcare Plans	86%	+1.81%
Semiconductors	82%	+1.39%
Oil & Gas Exploration & Production	72%	+1.08%

Breadth is the share of the industry's stocks above their 200-day average. Momentum is the median distance of those stocks from their 50-day average.

STRATEGY: CASH-SECURED PUTS

Screen: 482 with option volume -> 135 in bullish industries (or ETFs judged on their own trend) -> 76 above their 50- and 200-day averages -> 70 clear of earnings -> 34 liquid puts at 20%+ annualized

HOW TO USE THIS LIST

1. A name marked "Dip" is above both averages and fell at least 2% in a day or 5% in five days, a pullback inside an uptrend. Put credit is higher after a drop.
2. Exit: place a buy-to-close order at the "Buy back at" price. That captures 75% of the credit, usually in days rather than weeks.

Risk: leveraged funds can fall far faster than the stock they track. A gap down can lose much more than the credit collected. Size so that owning the shares at the strike is acceptable.

Chance of profit is the probability the stock ends above break-even at expiry, implied by option prices; not a forecast. Expiry is the one with the most open interest 7-45 days out, before any earnings date. Put IV is the implied volatility of the selected contract.

FILTER APPLIED

Industry: the industry is "up" in the industry tape: at least 5 names, median distance above the 50-day average of +1% or more, and 55% or more of its names above their 200-day average. Funds follow the industry or sector of what they track; a fund that tracks neither is judged on its own trend.
Stock: close above both its 50-day and 200-day averages (a fund with no 200-day history: 50-day only).
Earnings: earnings more than 10 days away, and the put expires before them; volatility funds excluded.
Option volume: average of at least 1,000 contracts a day over 20 days.
Put: about 0.20 delta (accepted range 0.10 to 0.30), expiry 7 to 45 days out, open interest at least 100, bid-ask spread at most 25% of the mid, cash needed (strike x 100) at most $100,000 per contract.
Order: highest implied volatility of the selected put first.
